

## Pathfinda

### Baggage / Parcel Alignment System

Partners in innovation Herbert Systems together with Intralox, Europe's leading belt experts have developed a revolutionary solution for simple product orientation.

The Pathfinda centralises and orientates suitcases / parcels from any angle and presents to key equipment such as examination / x-ray machines where the entry point is critical. This unique conveyor can also be used prior to inclined conveyors where products can become trapped at the transfer point.

A key feature of this system is the flexible design that allows easy installation into existing systems. Its simplistic control easily integrates with ancillary equipment making the operation user friendly.

Partner in Innovation

### Features

- Simply integrates within existing equipment
- Space saving minimal footprint
- Proven reliability in commercial trials
- Aligns all types of passenger luggage
- User friendly-low operator intervention
- Easy access within orientation zone
